TREE, SHRUB AND FRUIT SEEDS

PRICE LIST

Autumn 1928 - Spring 1929

Thomas J. Lane

SEEDSMAN

Dresher, Penna., U. S. A.

Conditions and Terms

All offers and acceptances of orders are subject to my receiving the full quantity for which I have placed orders with my growers and collectors. Failing to get these amounts, I reserve the right to reduce proportionately all orders that have been booked; or fill orders in rotation received while supply lasts.

The prices in this list are based on an average crop and normal cost of collecting and preparing the seed. If though unforeseen contingencies the cost of any item is extraordinarily increased I reserve the privilege of proportionately advancing the price of such items of accepted orders, subject to the buyer's option to pay the increased price or cancel those parts of his order.

I give no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds, bulbs or plants I send out, and will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned.

All Claims Must be Made Upon Receipt of Goods

AFTER GOODS ARE PLACED ON BOARD CARS HERE, I ASSUME NO RESPONSIBILITY FOR THEIR SAFE DELIVERY OR ANY INJURY CAUSED BY DELAY IN DELIVERY BY THE TRANSPORTATION COMPANY.

SACKS AND BOX AND PACKING CHARGED ADDITIONALLY.

Not less than one-half pound will be supplied at pound rates nor one-quarter bushel at bushel rates.

When seeds are to go by mail, postage is charged at Parcel Post rates in U. S. A. Consult your postmaster as to your zone and allow charges accordingly. Foreign countries 12c. per pound for postage.

SATISFACTORY ARRANGEMENTS FOR PAYMENT MUST ACCOMPANY ORDERS FROM UNKNOWN CORRESPONDENTS.

All P. O. orders payable at Dresher, Pa., U. S. A.

Terms—Net Cash.

SPECIAL PRICES WILL BE QUOTED ON LARGE QUANTITIES.

Cable Address "LANE AMBLER" A. B. C. Code 4th and 5th Edition.

All orders will receive my best attention. Packing for shipment will receive special care and seeds will be packed in a manner that will permit their reaching destination in perfect order.

General Information and Suggestions For Planting

Seeds to germinate must have the proper conditions of heat and moisture. These conditions vary greatly with different seeds. Experience and close attention are necessary to successful propagation and the propagator must be a close observer of the wants and habits of trees and plants and be able to gather knowledge from what he may see. Owing to certain conditions of moisture, temperature and time which they do not always meet with after sowing, seeds sometimes fail to appear the first season. Examine them at close of Spring, and if found sound do not disturb them, and their germination may be looked for the season following.

Seeds of deciduous trees and shrubs are best sown in the Fall, pines and similar evergreens in Spring, but deciduous ones will grow very well sown in Spring if kept in good condition through the Winter. When sown in Spring seeds of a hard, bony nature, such as the yellow locust, are best soaked in hot water for a day or two and then sown at once. Seeds of maples, ash, magnolia, beech, all nut trees, as well as many other kinds require to be kept slightly moist over Winter if not sown in Fall; on the other hand, catalpa and some others may be kept quite dry until Spring comes.

Junipers, hollies and a few similar seeds remain a full year before sprouting. It is just as well, therefore, to keep them in a box of soil until the next Autumn, then sow them.

If the planting is done in the Fall it is better to mulch the ground with straw, leaves, or any like material; this will prevent baking of the soil after the Spring rains, and keep it in a nice mellow condition. The mulching should be removed in the Spring, or, at least so much that it will not interfere with the growth of the young seedlings.

The seed of evergreens is always found in cones, with the exception of the juniper and yew, which produce small berries; hence, the general name applied to evergreens of coniferae, or cone-bearing.

The soil most suitable for raising conifers is a light sandy loam, rich in vegetable matter, but entirely free from rank manures. The soil should be deeply spaded and thoroughly pulverized. Then lay off in beds four feet wide, and any desirable length, with paths of one foot between. The beds should be higher in the middle, the sides being but little higher than the paths. The seed is usually sown broadcast and then carefully and lightly raked in; but some prefer sowing in drills a few inches apart, then rolling, or pressing with back of the spade, and sifting over them a very light covering of one-eighth to one-quarter of an inch of soil. The ground should be prepared the Fall before, and the seed put in at the earliest possible moment in the Spring. Most failures in growing evergreen seedlings arise from not having the seed beds partially shaded. If hot sunshine falls on them while the seeds are swelling, and cold follows, a large proportion will rot before they appear above the ground. When seedlings are raised extensively artificial arbors are made high enough to work under. When the growing is done on a less extensive scale, stakes are driven at convenient distances along the sides of the beds to which boards six inches wide are nailed, to support screens for shading the young seedlings. The lower edge of these boards should be but four or five inches above the surface of the ground, to allow the air to circulate freely over the beds. Lath screens are very satisfactory.

The following suggestions may be of service to the nurseryman, but should be changed as conditions may require.

Andromeda Azalea	Kalmia	Rhododendron	Sow in peat moss or fine leaf mould in well protected seed bed.
Carpinus Edgeworthia	Prunus	Silver maple Quercus Ulmus	Sow as soon as possible after seeds are received.
Acer Aesculus Benzoin Calycanthus Caragana Carpinus Celtis Chionanthus	Cinnamomum (in warmer weather) Cornus Corylus Fraxinus Juglans Liriodendron	Ligustrum Pinus Strobus Prunus Roses Taxodium Tilia Rhus Syringa	Sow in Autumn or when seed arrives.
Actinidia Akebia Berberis Catalpa Cercidiphyllum Clematis	Desmodium Diospyrus Fagus Gleditschia Juniperus Kerria	Paeonia Pines Pyrus Sambucus Sophora Staphylea	Sow in early spring.
Abies Ampelopsis Aralia Aucuba Betula Biota Buxus Celastrus Cercis Chamaecyparis Clethra Cryptomeria Cydonia	Euonymus Ginkgo Hibiscus Ilex Larix Lindera Liquidambar Magnolia Morus Nandina Paulownia Photinia Picea	Pinus Pueraria Rhodotyphus Robinia Sciadopitys Spirea Styrax Taxus Thuja Tsuga Viburnum Wisteria	Sow in spring after danger of frost is past and soil is warm.
Carya Crataegus Juniperus	Magnolia Rhodotyphus Taxus	Tilia Viburnum	Stratify before sowing; seeds germinate slowly.
Buxus Camellia Cercis Gleditschia	Ilex Photinia Pueraria Robinia	Rosa Sophora	Soak in hot water just before planting.
Ampelopsis Aucuba Berberis Cinnamomum Euonymus	Ginkgo Hedera Ligustrum Lindera Magnolia	Prunus Rosa Sapindus Viburnum	Wash off thick pulp before stratifying or sowing.

Practical Plant Propagation by Hottes, is a very helpful book for planters. It contains much valuable information. Price \$2.15 Post-paid.
